

CASE STUDY – COMMERCIAL

General Projects in the South of England

Shire have completed a number of projects in the Commercial Development area of construction, since being founded in 1995.

Employing Carpenters and Plumbers, Shire can offer the full washroom installation service, including;

- a) Solid grade and High Pressure Laminate cubicles
- b) WC and wall duct panelling
- c) Vanity units with associated top, including laminate, Corian and Granite
- d) Sanitaryware installation and final plumbing connections
- e) Other trades, such as flooring, ceilings and painting

Recently, Shire were involved with the refurbishment of 3 toilet blocks at Bristol International Airport. Works were both landside and airside, including working during the night. The project involved the installation of new solid grade cubicles, wall panelling and Corian vanity units.

Associated sanitaryware was also installed along with water saving sensor taps and urinal flushing controls. The project was completed over a short space of time, to a high standard resulting in a satisfied client, being able to re-open the toilets in time for a busy easter period.

The panelling system utilised Trespa Virtuon as a core material, which provided a good hard wearing finish, but also had a featured light reflectance. Shire also had washroom shapes routed into the solid grade panels, which were then back-lit.

Working with Wates Construction, Shire were appointed as the washroom installer at the Jacobs Engineering project at Winnersh Triangle in Reading. The work involved the installation of a high end cubicle system as manufactured by Amwell Systems Ltd, called Sytan. This involved the design of a flush fronted veneered cubicle system, along with associated WC duct panels.

To compliment the installation, Corian vanity units with integral Corian bowls were also fitted, with matching upstand.

Shire also undertook the washroom package for Avon and Somerset Police at Contact House in Bristol. This involved the installation of solid grade cubicles, WC back panels and solid grade vanity units, in combination with the installation of sanitaryware.

Final plumbing connections were also completed, along with the supply and fit of the washrooms accessories such as hand driers and soap dispensers.
